Abstract (en)

This constructive system allows you to erect buildings for any type of use, especially for residential use. It foresees self-supporting panels for the various types perimetral walls, lintels for windows and doors, partition walls, slabs with or without balcony aggregates, two- or three-flight stairs with or without elevator, roofs complete with relevant coverings. This system also foresees various types of foundation elements - rectilinear, angular, T-shaped and cross-shaped - that are connected one another by means of male and female profiles and steel tie rods. The panels used for the perimetral and supporting walls can also be connected one another by means of steel tie rods. The slabs have: dap joint profiles made of cold-rolled steel sheet metal which will be connected one another by means of intermitted welding; PVC or steel pipes buried into them for the passage of household systems piping. <IMAGE>
