Abstract (en)
[origin: EP1063370A1] The cover (30) is pivoted on the lever (20) and may be swung aside to expose a cylinder lock. The lever may rest in a fitting (12) with a trough in its top surface, which engages in a slit in the thin wall (14) and is held in place by fastening screws (38,52). There is a locking mechanism (34) and a bolt (36) on the opposite side of the thin wall to the lever, and there is also a guide (50) through which the bolt may slide.
