Abstract (en)
The invention provides a method of manufacturing a display, particularly for chilled products, which includes an improved simulation of ice blocks. The method comprises manufacturing a display (10) by creating a plurality of blocks (13, 14) of transparent plastics material, characterised by coating at least some of these blocks (13, 14) individually with a transparent film of material, assembling said coated blocks (13, 14) together within a pre-formed and at least partly transparent housing assembly (16, 17) and sealing the blocks (13, 14) within said assembly. <IMAGE>
