Abstract (en)

[origin: EP0947475A1] A method of making a glass multiwell plate for use in biological or chemical laboratory applications whereby the plate is formed by a single ribbon of molten glass passing twice over a mold such that the first section of glass takes the form of the mold and thereby forms the wells of the plate while the second section of glass covers the wells and forms a top surface of the plate. Holes are cut through the top surface, above each well to enable access. <IMAGE>
