Abstract (en)

[origin: DE19853586A1] The device (1) has a jacket part engaging around the injection valve (22) with a holder (3) to hold the valve via a support surface (7). The part engages around the valve within an angular area of max. 180 deg between two free ends (8,9) of the part. The support surface decreases in size towards the free part ends. The device may have two narrow holder parts separate by apertures. A tubular part (4) completely enclosing the valve is connected to the holder part.
