Abstract (en)

[origin: FR2776402A1] Each consumer is issued with a transponder module having a memory and means of consumer identification. Written to memory is consumer relevant information such as account balance, and for each product in the restaurant an identification code and a value. A pay point has a reader capable of identifying the consumer and any products selected. The module is then updated appropriately.- DETAILED DESCRIPTION - The card is updated by determining which products have been picked and subtracting the appropriate value for the product from the consumer's account balance held in memory
