Abstract (en)

A tensioning device (1) for lace fastenings, particularly for sports shoes, is described, comprising a lever (2) associated with the lace fastening for tensioning the latter, and with which there is in turn associated a lace-constricting device (7). The lace-constricting device is capable of engaging at least one end of the lace (11) for retaining the latter in a first state of tension of the fastening, while the final state of tension is obtained by the action of the lever (2). <IMAGE>
