Abstract (en)
[origin: EP1065341A2] The locker unit has several lockers (39) arranged next to each other or on top of one another, which each have access units (14). Each locker has a transmitter unit (40) for radio signals, which uses the metal outer parts of the locker as an antenna. The access units, doors (22), locks, frame parts, walls bases or covers or door knobs or pulls may form the radio antennae. The transmitters automatically transmit an alarm if disturbed.
