Abstract (en)  
[origin: EP1065644A2] The material path has a support (1) with at least one film piece (2) and at least one label (3). The film piece and label are arranged on two areas of the support separated by a fold line (4), so that the one label can be arranged over the film piece by folding the support along the fold line. Preferably, the label is a protective coating label and has a mounting plate fixed on one side to a base part (8), a first adhesive layer (5) fixing the label to the support and a second adhesive layer (12) on the other side of the base part. Independent claims are included for a method and a device for processing a material path.
