Abstract (en)

[origin: WO9947323A1] The invention relates to a tile-cutting machine, comprising a rectangular machine plate (1) on which a pivotable cutter rail (5) with a cutter arm (7) and a longitudinal strip (9) with a scale (10) are located. The invention is characterised in that a rectangular positioning plate (15) is fixed on the surface of the machine plate (1), resting against the strip (9). Said positioning plate has a linear grating (20, 30) on the side pointing upwards, i.e. the side on which the workpiece is placed. Advantageously, said linear grating can have a parallel linear grating (20, 21, 22) and a diagonal linear grating (39, 31, 32).
