Abstract (en)

[origin: WO9950511A1] A support (1) for door frames, facades or the same, consisting of an inner part (4) that extends as far as the inner side (6) of the door and an outer part (5) that extends to the outer part (7) of the door, thereby enabling the parts to be thermally separated. Preferably, a polyamide insulator (8) is arranged between the parts. This results in a considerable improvement in the insulation qualities of the support area between the windows.
