Abstract (en)
[origin: WO9950516A1] A wooden flagstaff is composed of a plurality of long narrow starting components mutually agglutinated via flat surfaces (8), each one of which components being made of a number of end-wise interconnected wood pieces (7), e.g. boards having a limited length. At least one of the components is provided with a recess (11) extending along the entire length of the component, which recess has the purpose of forming a through air-duct (6) located in the centre of the staff, through which moisture may be evacuated from the interior of the staff. After agglutination, the components form a workpiece, which in a concluding step is turned to a complete flagstaff having the conventional, round shape.
