Abstract (en)

[origin: WO9947926A2] Methods for determining a binding profile for an inositolphosphoglycan (IPG) or a candidate mimetic compound are disclosed in which the IPG or candidate mimetic compound is contacted with an anti-IPG antibody in a binding assay and the binding of the IPG or candidate mimetic compound to the antibody is used to establish the binding profiles. The profiles are then used in methods for identifying candidate compounds for further testing or development as IPG mimetics.
