Abstract (en)  
[origin: WO9949351A1] The present invention is an eyeglass frame arrangement fabricated of a combination of a generally rigid, strong, nonelastic lens support, nose bridge, eye socket engager, and temple bows (13). The arrangement is also equipped with a generally nonelastic restraining strap (14) removably engaged around the back of the head. The arrangement is adapted for use while engaging in activities which involve the possibility of physical forces, and/or usages around bodies of water. The arrangement, when secured, applies only an insignificant amount of pressure to the user's head. The arrangement is such that water easily drains out of the bottom of the arrangement.
