Abstract (en)
A circularly knit tubular hosiery member and garment formed therefrom and a method for producing both. The member has a first tubular portion with a lateral portion having a plurality of courses with short stitch lengths. The garment is formed from a pair of the members disposed in a side-by-side relationship, slit along a part of their length and joined at pairs of the edges thus formed to provide a panty section with front, rear and lateral portions. The lengths of the stitches in the courses in the lateral portions are shorter than the stitch lengths in the front and rear panty portions so that the panty section has an arcuately shaped leg profile within the lateral portions. The method includes forming the panty pantyhose combination garment from the two separate tubular members with the stitches in the courses of the lateral portions made smaller than the stitch lengths in the rear and front portions. <IMAGE>
