Abstract (en)
[origin: EP1066771A1] A cosmetics applicator assembly, especially a mascara brush, comprising a cap 8 to a container having a wiper 6 in its neck 3, has a stop 20 at the end of a rod 12, immediately above the applicator 14, the rod tapering towards the stop. The wiper is provided with fingers 22 which bear against the rod so that as the applicator is withdrawn from the container as the tapered portion passes them they relax until their ends contact the stop which inverts them as it passes, the fingers remaining intumed until the applicator passes them when they will revert to their relaxed state removing any blob of cosmetic from the end of the applicator. <IMAGE>
