Abstract (en)

[origin: EP1067058A1] The sachet for food to be reheated has a heat sealed area (32) on the wall of the sachet of greater tear resistance than the sachet material. The contour of the heat sealed area defines at least one point on the surface of the sachet to allow tearing of the sachet material (14) under pressure. The point can be formed by a perforation (50) in the wall of the package.
