Abstract (en)

An apparatus for continuously treating a fabric by means of vibrations comprises a first element (5) for guiding and feeding the fabric (1), a vibration source (19), an element (2; 50; 60; 70) capable of vibrating and associated with the fabric (1), a second element (6) for guiding and feeding the fabric (1), and a third guiding element (2; 50; 60; 70) which is in direct contact with the fabric (1) and is movable therewith; the third guiding element (2; 50; 60; 70) is associated with the vibration source (19) and itself forms the element (2; 50; 60; 70) capable of vibrating; it is subject to vibrations which are transmitted directly to the fabric (1). A method for treating a fabric by means of vibrations is also described. <IMAGE>
