Abstract (en)
[origin: EP1067569A1] The switching point two fixed switching parts (1,2), a movable, electrically conducting bridge switching part (3) that shorts the fixed parts in the closed state of the switching point and a drive for moving the bridge switching part. The fixed and movable switching parts and drive coils (5,6) are arranged symmetrically wrt. an axis so that the fixed switching parts are in the form of mutually engaging cylinders and bound an annular gap (81). The bridge switching part is an axially movable contact ring that fits in the annular gap in the closed state and the coils are arranged on both sides of the contact ring and mutually offset in the axial direction.
