Abstract (en)

[origin: EP1067649A2] The system has at least one computer (1) that manages data (Q,C,R) for a number of connected producers (W,BB,F), suppliers and/or transporters of the conductive medium t and controls the supply of the medium to at least one consumer (V1-V4). The data contain names and/or memory addresses, current and/or long-term free capacity of lines and/or current and/or long-term potential supply capacity of suppliers or producers and/or prices. An Independent claim is also included for a method of controlling a current delivery system.
