Abstract (en)
[origin: DE19812515A1] The grinder-blades (2) are positioned round the periphery and or end sides of the rotational axle (1) and are fixed to a support body (4) which has at least one rotationally symmetrical outer surface (6,10) onto which at least some of the grinder blades are fixed. At least one of the outer surfaces is parallel with the rotational axle or slopes at least by less then 80 degrees to the rotational axle. The support body has a central element (7) as disc and extending radially from the rotational axle. The grinder tool is connected to a drive mechanism by a central hole (5) and support surface (8).
