Abstract (en)
[origin: DE19814134A1] The invention relates to a closing machine to seam round or noncircular cans, comprising two seaming stations (1, 2) that can rotate around a central axis (100), each having a sufficient number of seam rolls to curl the lid placed or optionally clinched on a can during transit time in which the can is located in the seaming station. The invention is characterized in that both seaming stations are arranged in the immediate vicinity of each other.
