Abstract (en)

[origin: WO9951509A1] A package (10) for storing and dispensing measured amounts of a fluid product is provided wherein the fluid product can be mixed with another fluid or absorbent material in the package prior to use. The package has a first compartment (18) with the fluid product stored therein and a second section (24) separated from the first compartment by a breakable seal (26) wherein the fluid product can move through the seal and into the second compartment upon compression of the first section. The second section has an absorbent material (16) or an additional fluid product stored therein. Means (38) are provided for accessing the second section so that the mixed products or absorbent material can be dispensed from the package.
