Abstract (en)

[origin: EP1068817A2] The container consists of a base (11) with a removable cap (12) and an inner sleeve (13) to hold the stick product (16). The sleeve is equipped with a series of convergent fins (19) to grip the product, which can be introduced in liquid or solid form, and is fixed to the container base by clipping onto a projecting inner ring (17). When the product is introduced in liquid form, through a hole (18) in the base, an inner cover (14) is used to mould its shape.
