Abstract (en)

A sales presentation of plastic bottles rests on a shelf surface which is inclined towards the customer. The plastic bottle bases have low contact with the shelf surface and a relatively high center of gravity. When the foremost bottle is removed, the remaining queue of bottles slides forward, filling the resulting gap. The two rearmost bottles stand on a sledge (L) base, whose lower surface either has a low coefficient of friction, or rollers. The sledge leading edge has an upright frame (B) for the inclined bottles. The sledge and load exerts a force from the rear on the queue of bottles at the front, maintaining the front bottles in an upright position.

Abstract (de)

Die Erfindung betrifft ein Zubehör für eine Warenreihe in einer Rutschauslage. Ein Laufwagen L nimmt die zwei hintersten Flaschen einer Warenreihe auf. Dies verhindert ein Umfallen der davorstehenden Flaschen beim Nachrutschen. <IMAGE>
