Abstract (en)

[origin: EP1068823A1] A sales presentation of plastic bottles rests on a shelf surface which is inclined towards the customer. The plastic bottle bases have low contact with the shelf surface and a relatively high center of gravity. When the foremost bottle is removed, the remaining queue of bottles slides forward, filling the resulting gap. The two rearmost bottles stand on a sledge (L) base, whose lower surface either has a low coefficient of friction, or rollers. The sledge leading edge has an upright frame (B) for the inclined bottles. The sledge and load exerts a force from the rear on the queue of bottles at the front, maintaining the front bottles in an upright position.
