Abstract (en)

[origin: EP1069046A1] The flask (1) has a part that forms the reservoir (9) with a threaded neck (3) attached to the body (2) formed by blow moulding. The stopper (4) has an internal sealing capsule (5) that threads onto the neck, and an external cap (6) fixed onto the internal sealing capsule. The reservoir has a positional locator (15) that engages with the stopper to lock it in a predetermined angular position at the end of the thread. The positional locator is formed by blow moulding with the body.
