Abstract (en)

[origin: EP1069052A1] The bottle has a threaded neck which is covered by a top which consists of an inner seal cap and an outer trim cap (6) fixed to it. The bottle is made with a projecting stop adjacent to its neck, and the outer cap has at least one inner surface (30) shaped to engage with it to position the cap symmetrically with the bottle when closed. The shaped inner surface (30) of the cap is formed in the thickness of a tubular skirt (22) made in one piece with the outer cap and designed for fixing it to the inner seal cap. The skirt's lower edge is covered by a metal ring (12).
