Abstract (en)

[origin: EP1069277A2] The sun blind has a sun blind surface (52) and an associated drive, coupled to a setting control (14) which uses a stored program held in a memory for adjusting the blind surface as a function of at least one entered input value. The blind surface can be adjusted independently via a manual setting adjustment, with the manual setting and at least one of the input values at the time of the manual adjustment stored for updating the original programming.
