Abstract (en)
[origin: EP1069372A2] The invention relates to an anti-dazzle screen (26) for a lighting fitting, which comprises two reflector sides (2) opposite each other and lamellas (1), which are compressible per Se, connect said reflector sides with each other and are made of double sheet material. The reflector sides (2) have recesses (6), into which the gable ends (13) of the lamellas will be inserted, and there are means (24, 25) designed to fasten the lamellas to said recesses. According to the invention said gable ends (13) are fastened in an expanded condition at the reflector sides (2) and will fill said recesses (6) in a non-compressible condition. The gable ends have tongues (15) outside the reflector sides, which are directed against each other in order to secure the expanded position of the lamellas in the recesses in the reflector sides (2). The invention also relates to a method of assembling an anti-dazzle screen according to claim 1, which is characterized in that said gable ends (13) are fastened in an expanded condition at the reflector sides (2) and consequently will fill said recesses (6) in a non-compressible way. <IMAGE> <IMAGE>
