Abstract (en)

Assembly of a ring core carrier and one or several ring cores. The ring core carrier is provided with a top plate and a bottom plate situated at a distance thereof, and has threaded fixation rods connecting the top plate and the bottom plate to each other. Possibly a number of central rods can be placed centrally between the top and bottom plate, the number of central rods together defining an inner diameter. Furthermore a number of threaded attachment rods have been placed between the top and bottom plate. Each of the ring cores has either an inner diameter allowing fixation of the ring cores about the central rods, or an outer diameter allowing fixation of the ring cores within the threaded fixation rods.
