Abstract (en)

[origin: EP1069585A2] The electromagnetic switch mechanism has a moving contact (11) mounted on a base (2). A trigger (12) is mounted on the moving contact (10), pivoting between an open and closed position. A shoulder section (22) is manually set to arm the switch. Driving the trigger electromagnetically activates the switch contact (3) through an intermediate section (28).
