Abstract (en)
[origin: DE19816202A1] The invention relates to a massing (1) for erecting structures. Said massing consists of individual, identical prefabricated structural units with bearing surfaces (2) which each form a unit with two supports (7, 8). The invention is characterised in that the two supports (7, 8) of a prefabricated structural unit are located on a long side (3, 4) or a narrow side (5, 6) of the bearing surface (2) or diametrically facing each other on opposite sides of the bearing surface (2), and in that the supports (7, 8) each have a free front area (11, 12) at their upper ends on which a supportless part of an adjacent prefabricated structural unit can rest.
