Abstract (en)
[origin: WO9930474A1] A system for providing a universal interface between narrowband and broadband networks for use in a public switched network includes a main element manager (101) governing communications between a narrowband network and a broadband network, a service management system (305) having a master database (330), a data access layer (160), and at least one SMS application (325), and an interface element manager (405) controlling utilization of the master database (330).
