Abstract (en)
[origin: EP1070635A2] Vehicle navigation procedure in which a driver enters start (current) and finish locations to a journey planner. The journey planner then offers at least one parking possibility in the target location and uses the selected parking location as a precise target point in determination of a route. The suggested parking location can be chosen according to one or more criteria: parking location closest to desired end point, cheapest parking, covered parking, shortest distance to a point of interest, etc.
