Abstract (en)  
[origin: EP1070826A2] The roller shutter box comprises fascia covers (1) and at least one base cover (2) as well as side end covers (3) with one or more separation spots (T) provided in each of the covers so that the relevant cover can be opened and closed again. The separation spot can be formed as a detent seat connection (R). All the covers and separating spots can be combined by connectors (6) into one structural unit. The connectors can be in three parts with cover arms (6a) at the end sides and a connecting web (6b) in the middle.
