Abstract (en)

[origin: EP1071168A2] The carrier system includes at least one carrier part comprising at least one outer part (10) into which at least one inner part (12) can be inserted, the inner part being movable between an initial position and a final position relative to the outer part. An operating member (20) sequentially moves the inner part in at least two different directions relative to the outer part. The directions may be at right angles to each other. An operating member is also claimed.
