Abstract (en)
[origin: WO9954313A1] The invention relates to novel 6-membered bicyclic compounds of general formula (I) Ra-Het-A-Ar-Rb, wherein Ra, Rb, A, Ar and Het have the meanings given in claim 1, their tautomers, stereoisomers, mixtures and salts and especially their physiologically compatible salts with inorganic or organic acids or bases, with valuable properties. The compounds of general formula (I) above wherein Rb stands for a cyano group represent valuable intermediate products for producing the other compounds of general formula (I) above and the compounds of general formula (I) above wherein Rb represents one of the following amidino groups and their tautomers and stereoisomers have valuable pharmacological properties, especially an anti-thrombitic effect.
