Abstract (en)

[origin: WO9947752A1] A paper based material for manufacture of single use hygienic products such as table napkins, handkerchiefs, toilet paper, and the like, bears on its surface a series of images consisting of texts (textual fragments) and/or pictures. Each image is completed in meaning and has a character which may be considered as attractive to a consumer. Various images in the series are arranged in such a way that each individual hygienic product which is made of this material bears an image unequal with the image on the other product. Images on the adjacent products may be linked to each other by a common idea or plot. The products may be packed in blocks in such a way that the images on the surfaces of the individual products in each block are unequal.
