Abstract (en)
[origin: WO0047872A1] A combination pneumatic tool and protective boot are provided. The pneumatic tool has a housing (18) and an exhaust port (20) for transmitting exhaust air from the tool along a path. The protective boot (30) is disposed about the housing and has a deflector (44) disposed in the path of the exhaust air for redirecting the exhaust air. The deflector preferably deflects the air away from an area surrounding the workpiece the tool is engaging without creating back pressure in the tool.
