Abstract (en)
The invention relates to a vessel, the hull of which takes an at least partially double-walled form, wherein a stiffening construction is arranged between the double walls (6,8) of the hull (3), characterized in that the stiffening construction comprises a number of troughs (2,9) which are connected fixedly to at least one of the walls (6,8). The invention also relates to a method for stiffening the hull of a vessel, comprising the following steps of: embodying the hull (3) in at least partially double-walled form; and arranging a stiffening construction between the double walls (6,8), characterized in that the method further comprises the step of: applying troughs (2,9) to manufacture the stiffening construction, wherein the troughs are fixedly connected to at least one of the walls of the hull. <IMAGE>
