Abstract (en)  
A package case for electric appliances and computers consists of an upper case and a lower case made of a tough thin plastic plate formed to have four sides and a bottom, an hollow interior defined by the four sides and the bottom and having a shape to correspond to the shape of a product to be packaged. Each of the four sides has a sloped outer and inner wall, and a plurality of curved recesses formed in the sloped outer and the inner wall and in the top of each side. The hollow package case placed in a carton may have excellent shock-absorbing function to protect a product packaged therein from damage or hurt caused by shocks or lowering movement in transporting. It is of low cost, handy to handle, reducing pollution to the environment, and having enough shock-absorbing ability for protecting electric appliances and Computers. <IMAGE>
