Abstract (en)  
[origin: EP1072741A1] The lock cylinder has electromechanical blocking of rotation, opposing electrical contacts on a shaft and an annular contact path (6) on its rotatable core (2,3) in contact with an inner contact (5). A first module housing (8) in a recess in an outer rotor contains a slip contact, a processor unit and an electromechanical locking device. A second module housing (9) contains a slip contact and an autonomous electrical supply and the module units are connected by an electrical conductor (10).
