Abstract (en)  
[origin: EP1072745A1] The fixture for locking a window or door has a slide bar (2) fitted in a back-cut groove (1) in the window or door frame (6). The projections forming the back-cut of the groove are engaged on both sides by holding components (4) on the slide bar. At least one of the holding components is engaged releasably on the slide bar. The slide bar in the area of the projections has a rabbet formation. The rabbet together with the holding component forms an accommodation groove for one of the projections. The depth of the rabbet is slightly greater than the width of the projections. The holding components are formed by two arms of a bolt part extending diametrically to a cylindrical positioning bolt (8).
