Abstract (en)
A terminal fitting for holding insulated wire and connecting it electrically with an object of connection easily and reliably without the need for a process of wire stripping. The terminal fitting is formed integrally of a conductive, metallic material, and has a terminal piece (10) to be connected electrically with an object of connection. Insulated wire (D) is pinched by plastic deformation of the metallic material to remove the coating from the insulated wire (D), and the exposed part of the wire is connected electrically. <IMAGE>
