Abstract (en)

[origin: FR2777775A1] The equipment (1) comprises a support (2) for the baby and a container (3) for a gaseous fluid (4) which is treated by a processor (G) and warmed by a radiant source. Measurements (61,62,7-10) are taken before and during operation and are supplied to a data processor (17). The measurements include temperature and hygrometric index of gaseous fluid, speed of gaseous fluid, support temperature, temperature of object simulating baby's skin
