Abstract (en)

[origin: WO9953894A1] The invention relates to the use of combinations of active ingredients having a sunscreen action, consisting of a) one or more water-soluble UV filter substances, especially those which on their molecular backbone carry one or more sulphonic acid groups or sulphonate groups, and b) one or more unsymmetrically substituted s-triazine derivatives. These combinations are used to produce water-resistant sunscreen preparations in the form of oil/water emulsions.
