Abstract (en)

[origin: WO9955876A2] The invention relates to a polypeptide with immunogenic properties and with a protein with modified biological functions. Said polypeptide has segments of the protein with 10-40 amino acids in a different arrangement to that of the protein. The invention also relates to a DNA which codes a polypeptide of this type, to a method for producing a polypeptide of this type, to the use of said DNA and said polypeptide for active immunization and to the antibodies which target the polypeptide.
