Abstract (en)
[origin: FR2777919A1] The paper sheet, especially of cellulose wadding, is embossed to form a series of small protuberances at a rate of over 30/cm² on one side of the sheet, measuring less than 1 mm² in area each, and corresponding cavities on the other side.- DETAILED DESCRIPTION
- The paper sheet, especially of cellulose wadding, is embossed to form a series of small protuberances at a rate of over 30/cm² on one side of the sheet, measuring less than 1 mm² in area each, and corresponding cavities on the other side. The protuberances are in parallel lines (B1, B2, B3), forming cells (C) which are not embossed or only slightly embossed. The cells cover at least 50 % of the sheet's surface, with at least three undulating parallel rows of protuberances between adjacent cells. The cells can be divided by single lines (I) into sections embossed with at least five protuberances each
