Abstract (en)

[origin: FR2778000A1] The device utilizes a type II twisted nematic crystal screen (1). On the surface (10,11) of the screen is provided a drawn plastic film (2) exhibiting biaxial birefringence and refractive index anisotropy. A holographic grating (3) is placed slanted with respect to the screen, and exhibiting optical axis uniaxial birefringence. The assembly is placed between cross polarizers (4,4').
